Education

Delft University of Technology *2025 – 2027*
MSc in Computer Science with Computer Systems and Cybersecurity track

Vienna University of Technology *Security Minor* *2024 – 2025*

Delft University of Technology *2022 – 2025*
BSc in Computer Science and Engineering with Data and Machine Learning Track

BSc Thesis: *Wi-Fi as a Sensor: Capabilities, Challenges, and Defenses* - Developed a comprehensive taxonomy of security defense mechanisms, evaluating their operational layers to guide future privacy-preserving wireless protocols.

Experience

Career Kickstarter — *Optiver* *April 2026*
Developed a Python-based order book application in a team of 3. Built the networking architecture using TCP sockets and Protobuf for data interchange, and managed deployment and testing across AWS cloud instances.

Teaching Assistant — Data Analytics — *Delft University of Technology* *Nov 2025 – current*
Guided students through core concepts in data analytics, including exploratory data analysis, regression, classification, clustering, and dimensionality reduction. Evaluated student progress by checking and grading lab assignments and exam submissions.

Software Engineering Development Intern — *Amazon: Madrid, Spain* *July 2025 – Oct 2025*
Migrated a legacy SQL service to a serverless AWS backend, provisioning infrastructure with VPC, NLB/ALB, and Route 53. Implemented DynamoDB with custom CRUD APIs and developed a Python data backfill script. Integrated AWS Lambda with API Gateway for scalable request handling and configured CloudTrail for security auditing.

Software Engineer Intern — *Man Group: Sofia, Bulgaria* *July 2024 – Sept 2024*
Reduced web application latency and significantly enhanced the user interface across a React/TypeScript, HTML/CSS, Java, and Kafka stack. Identified and resolved critical front-end issues, testing existing functionality and ensuring accessible, user-friendly UI components. Implemented targeted SSE optimizations, achieving a 31% increase in tab-switching speed.

Web Application Developer — *Union Entertainment: Delft, Netherlands* *April 2024 – June 2024*
Developed new functionalities and responsive layout changes for a web application using a React, TypeScript, HTML, and CSS frontend. Focused heavily on UX/UI design to create an accessible, flawless visual experience across devices. Maintained technical documentation and integrated OAuth 2.0 and YouTube APIs alongside a Django backend.

Projects

Enterprise Resource Planning (ERP) Software *June 2026 – Sept 2026*
Developed a custom ERP web solution for corporate management using a React/TypeScript frontend and Python backend. Built highly interactive and visually accessible data interfaces utilizing AG Grid, custom CSS, and HTML for robust data visualization. Managed system state and data storage seamlessly through a PostgreSQL database architecture, focusing on clean UX/UI and proactive front-end issue resolution.

Dumenitsa (Bulgarian Scrabble Platform) *Jan 2026 – current*
Developed and hosted a full-stack, real-time multiplayer web game utilizing React, HTML, and CSS for a responsive frontend and Node.js for the backend. Implemented custom React hooks for complex board logic, WebSocket-based synchronization for game state, and a robust word validation database using PostgreSQL.

Cross-Platform Hiking App *Sep 2025 – current*
In a team of 4 developed a cross-platform hiking app (React Native, iOS/Android) with a Spring Boot and PostGIS backend. Implemented GPX parsing, spatial queries, and peak detection; built REST APIs for activities, routes, and challenges. Integrated offline maps and live GPS tracking, and contributed to privacy features and anti-cheat validation, delivering a scalable, offline-first architecture with interactive map visualizations.

Technologies

Frontend & Design: HTML/CSS, JavaScript, TypeScript, React, React Native, AG Grid, UX/UI Design, Web Accessibility
Languages: Python, Java, C++, C, Rust, Scala, SQL
Backend: Node.js, Spring Boot, Django, REST APIs, WebSockets, SSE, AWS Lambda
Databases and Tools: PostgreSQL, MySQL, DynamoDB, PostGIS, Kafka, Docker, AWS, Git
